

This cross-sectional view shows a second conductive layer 118 deposited over the first conductive layer 116. The second conductive layer 118 is patterned into a series of rectangular blocks 122, 123, 124, and 127. These blocks are separated by gaps 125 and 126. The gaps 125 and 126 are filled with a dielectric material 121. The second conductive layer 118 is also shown as a continuous layer 117 on the left and 121 on the right. The first conductive layer 116 is shown as a continuous layer 116 on the left and 121 on the right. The substrate 101 is shown at the bottom.
